Silicone Oil moon-1401

INCI Name: Dimethicone and Cyclopentasiloxane

Introduction:

moon-1401 is a mixed product of Polydimethylsiloxane Gum dispersed in volatile cyclopentasiloxane and PDMS, with colorlessness, odorlessness and non-toxicity. The products has a high affinity with the skin and hair and can form a soft protective film. For it has containing volatility, the product can be added into the formulations and provide velvety and silky feel. The products is ideal material for the hair care products.

APPLICATIONS

Substantive character and unique feel make moon-1401.Fluid well suited for skin creams and lotions, cosmetics, sun screen and tanning products. It can be readily emulsified or combined with volatile silicone, mineral oil and cosmetic esters to provide a delivery vehicle for active ingredients such as sun screens.

Provides a soft silky feel and conditioning from hair care products. It is particularly useful against split ends.

SPECIFICATION

ITEMS	SPECIFICATIONS
Appearance	Colorless transparent thick fluid
Viscosity(25°C)	6000-8000cst
Non- volatile content	13%-15%
Specific gravity(25°C)	0.930-0.960g/cm ³
Refractive index(25°C)	1.3960-1.4000

HOW TO USE

moon-1401 Fluid improves the substantivity of other actives, under both water soaking and soap washing regimes. It is therefore possible to incorporate moon-1401 Fluid into skin care products to provide a water repellent, durable film. These actives may include sun screens, emollients and moisturizers.moon-1401 Fluid can also be used to prepare water resistant or waterproof sunscreen lotions with exceptional spreading characteristics.

Conclusion:

Conform to the standard of Anhui moon Silicone Technologies Co., Ltd.

Storage: Store in cool and dry place. Keep away from strong light and heat.

Shelf life: 2years when properly stored.

Properties

Velvety and silky feel
