PT-5000 platinum catalyst TDS

Product Description

- 1, Colorless transparent liquid, easy to disperse in silicone oil, silica gel.
- 2, This product is "Karstedt" (Karstedt) method synthesis of zero-valence platinum complex, with high activity, small amount of addition, stable performance, cost-effective characteristics; Can inhibit Si-Vi and Si-H reaction process accompanied by side reactions, to avoid the generation of black substances, to overcome the use of other catalysts in the product yellow or black phenomenon. Therefore, high transparency products can be prepared, and the transparency can reach the level of similar products in Japan, the United States, Germany and other foreign countries.
- 3, The platinum content of this product is 5000ppm, commonly used models are PT-8000 (8000ppm), PT-3000 (3000ppm), PT-2000 (2000ppm) and PT-1000(1000ppm), and can also be customized according to customer needs.
- 4, In line with EU ROHS, REACH, LFGB and US FDA regulations, completely environmentally friendly, non-toxic and harmless.

Main use

Liquid silicone rubber, silicone gel, high temperature addition silicone rubber, high temperature silicone vulcanization agent, silicone ink, molded silicone adhesive, paper spacer catalyst, polyether silicone oil, amino silicone oil and other synthetic catalysts, flame retardant silicone products with high efficiency and environmental protection flame retardant.

Method of use

High-temperature glue is added to this product in the kneading machine, and other kinds of glue can be added in the planetary mixer or high-speed dispersing machine.

Packaging

1 kg/bottle or 5 kg/bucket

Storage conditions

Keep it sealed away from light and away from heat and fire. Do not contact with nitrogen, phosphorus, sulfur, tin, lead, mercury, arsenic (N, P, S, Sn, Pb, Hg, As) and other elements of the compound, otherwise easy to cause platinum poisoning and reduce the catalytic effect. The number in front of the lot number is the date of production, and the shelf life is 12 months from the date of production.
