

Technical data sheet

MOON-O187 3-(2,3-Epoxypropoxy)-propyltrimethoxysilane

Formula:

Foreign corresponding brand:

General chemistry	Dow corning	ShinEtsu	Degussa	CHISSO
A-187	Z-6040	KBM-403	GLYMO	KH-560

Technical indicators

Brand:	MOON-O187
Chemical name:	3-(2, 3-Epoxypropoxy) propyl trimethoxysilane
CAS no. :	2530-83-8
EINECS no. :	219-784-2
Molecular formula:	C ₉ H ₂₀ O ₅ Si
Appearance:	Colorless transparent liquid
Density (ρ ₂₀ , g/cm ³):	1.0700 + / - 0.0050
Refractive index (n _{25D}) :	1.4280 + / - 0.0050
Content	98%

USES:

1. This product is widely used in ship coatings and industrial anticorrosive coatings, increasing the adhesion and anticorrosive performance of coatings.
1. This product can improve the bonding strength of epoxy resin and base material, and improve the electrical properties of epoxy resin electronic materials, potting materials and printed circuit boards, especially the wet electrical properties.
2. It is mainly used in unsaturated polyester composites, which can improve the mechanical property, electrical property and light transmittance of the composites, especially the wet state property of the composites.
3. The wet mechanical strength and electrical properties of the glass fiber reinforced composite can be improved by wetting the glass fiber with the coupling agent.
4. In the wire and cable industry, this coupling agent was used to treat EPDM systems filled with peroxides crosslinking with clay, and the consumption factors and specific inductance capacitances were improved.
5. Copolymerization with vinyl acetate and acrylic acid or methacrylate monomers, which are widely used in paints, adhesives and sealants, provides excellent adhesion and durability.

Packing:

210L iron drum: 200kg/ drum

1000L IBC drum: 1000kg/ drum
